- 1) The load in the table excludes flasher. When applied in flasher, a special silver alloy (AgSnO<sub>2</sub>) contact material should be used and the customer special code should be (170) as a suffix. Please heed the anode and cathode's request when wired, terminal 30 should connect with anode.
- 2) Corresponds to the peak inrush current on initial actuation (cold filament).
- 3) A low resistive or diode suppression device in parallel to the relay coil increases the release time and reduces the life time caused by increased erosion and / or higher risk of contact welding.
- 4) The load wiring diagrams are listed below (Ratings of NO, NC are tested based on different samples separately) :

- 5) Loads mentioned in this chart is for relays with no parallel diode or Zener Diode. For those with parallel diode, Zener Diode or other components, please contact Hongfa for more technical supports.  
 Please also contact Hongfa if the actual application load is different from what mentioned above.

## CHARACTERISTIC CURVES

### 1. Coil operating voltage range

- 1) There should be no contact load applied when maximum continuous operation voltage is applied on coil.
- 2) This chart takes dust protected, 12VDC coil voltage version as example.
- 3) The maximum allowable coil temperature is 180°C. Considering the coil temperature rise which is measured by resistance is average value, we recommend the coil temperature should be below 170°C under the different application ambient, different coil voltage and different load etc.
- 4) If the actual operating coil voltage is out of the specified range, please contact Hongfa for further details.

### 2. Load limit curve (at 23°C)

- 1) This chart takes NO contact, resistive load as example.
- 2) The load and electrical endurance tests are made according to "CONTACT DATA" parameters' table. If actual load voltage, current, or operate frequency is different from "CONTACT DATA" table, please arrange corresponding tests for confirmation.

### 3. Ambient temperature curve of the electrical endurance test

- 1) The minimum temperature is -40°C.
- 2) The maximum temperature is 125°C.
